

2" SELECTWAVE CORDLESS FAUX WOOD BLINDS INSTALLATION AND OPERATING INSTRUCTIONS

Step 1. Check Package Contents Part List

A) Mounting Brackets: 2 - Up To 33" Wide;
3 - Up to 48" Wide; 4 - Up To 72" Wide

B) 1 1/4" Screws: Four Per Mounting Bracket

Step 2. Tools Required

Step 3. Bracket Location and Installation

IMPORTANT: DO NOT MOUNT BRACKETS DIRECTLY ABOVE SPRING MECHANISMS IN HEAD RAIL

Step 4. Secure the Head Rail

Blind can be inside or outside mounted. For Inside mount, minimum for flush mount is 3 inch depth. Minimum mounting depth is 2 inches.

REMEMBER: Do not align the brackets directly over the cord spring mechanism. It can cause the blind to not operate properly.

Step 5. Operate Cordless Faux Wood Blind

To lower the shade: Grip bottom rail evenly and pull down to the desired length. To raise the shade: Grip bottom rail evenly and lift towards head rail to desired height. To adjust the angle of the slats: Grip bottom rail evenly and gently pull down or gently lift up to rotate the slats.

IMPORTANT! Always lower and raise at the center of the blind, or equally on each end of the blind, to assure that the bottom rail remains even.

RAISING FROM THE LEFT OR RIGHT HAND SIDE OF BOTTOM RAIL CAN CAUSE INNER CORDS TO TANGLE IN RETRACTING MECHANISM AND WILL MAKE BLIND UNLEVEL AND/OR INOPERABLE.

If the blind is not able to raise to the top, try using two hands to operate the blind as illustrated above.

Maintenance Of Your Cordless Blind

To maintain optimal performance of the springs that make your cordless blind function, lift and lower your blind through its full range of motion – all the way up and down to reset the springs.

ENJOY YOUR NEW CORDLESS 2" FAUX WOOD BLIND
